

Creating Citation Report with H-index

1. Search by author's name or author identifier (ORCID or ResearcherID). If you search by author's name, truncate the initial with asterisk *. You can also use the Author Index.

2. Limiting the search results

You can limit the search results e.g. by author's organization and/or document type (e.g. article, review, letter, note).

Important! Check that all author's publications published in journals with impact factor are included in the search results. If there are articles missing, repeat phase 1 by searching e.g. with article title. Combine the found articles to the previous search results with OR operator.

3. Creating citation report with h-index

Click *Create Citation Report*.

The screenshot shows the top navigation bar with buttons for 'Select Page', 'Save to EndNote online', and 'Add to Marked List'. On the right, there is a menu with 'Analyze Results' and 'Create Citation Report' (highlighted in a red box). Below the navigation bar, two search results are visible. The first result is 'Musculoskeletal pain and re-employment among unemployed job seekers: a three-year follow-up study' by Nwaru, Chioma A.; Nygard, Clas-Hakan; and Virtanen, Pekka. The second result is 'Social adversities in adolescence predict unfavourable trajectories of internalized mental health symptoms until middle age: results from the Northern Swedish Cohort'. To the right of the results, there are statistics for 'Times Cited' and 'Usage Count'.

4. Check the publication listing (and remove the publications you don't want to include in the report)

If necessary you can remove items from the publications listing by selecting the item and clicking go.

The screenshot shows the 'Citation Report' interface. At the top, there is a 'Sort by' dropdown menu set to 'Times Cited -- highest to lowest'. Below this, there is a table with columns for years (2012-2016), 'Total', and 'Average Citations per Year'. The first row of data shows 306, 313, 432, 367, 242, 4060, and 78.08. Below the table, there is a list of items. The first item is 'Temporary employment and health: a review' by Virtanen, M.; Kivimaki, M.; Joensuu, M.; et al. A red box highlights the 'Go' button next to the date range filters (1945 and 2016).

Important! You must remove items one page at a time, because Web of Science only remembers items marked per page. There will be new item from previous page in place of the removed, so each page has to be checked several times! Web of Science changes the "Sort by" option as "Times Cited – highest to lowest" after each removal.

5. Information in the Citation Report

On the top of the page you will see sum of the times cited, h-index etc.

The screenshot shows the 'Citation Report: 298' page. At the top, it says 'You searched for: AUTHOR: (virtanen p*) ...More'. Below this, there are two bar charts. The first chart is 'Published Items in Each Year' and the second is 'Citations in Each Year'. To the right of the charts is a summary table with the following data:

Results found:	298
Sum of the Times Cited [?]:	2804
Sum of Times Cited without self-citations [?]:	2375
Citing Articles: [?]:	2123
Citing Articles without self-citations [?]:	1949
Average Citations per Item [?]:	9.41
h-index [?]:	26

The orange coloured line in the publications listing marks the h-index. In this example h-index is 26, because there are 26 publications above the line (i.e. of the 298 articles considered there are 26 articles that have been cited at least 26 times).
